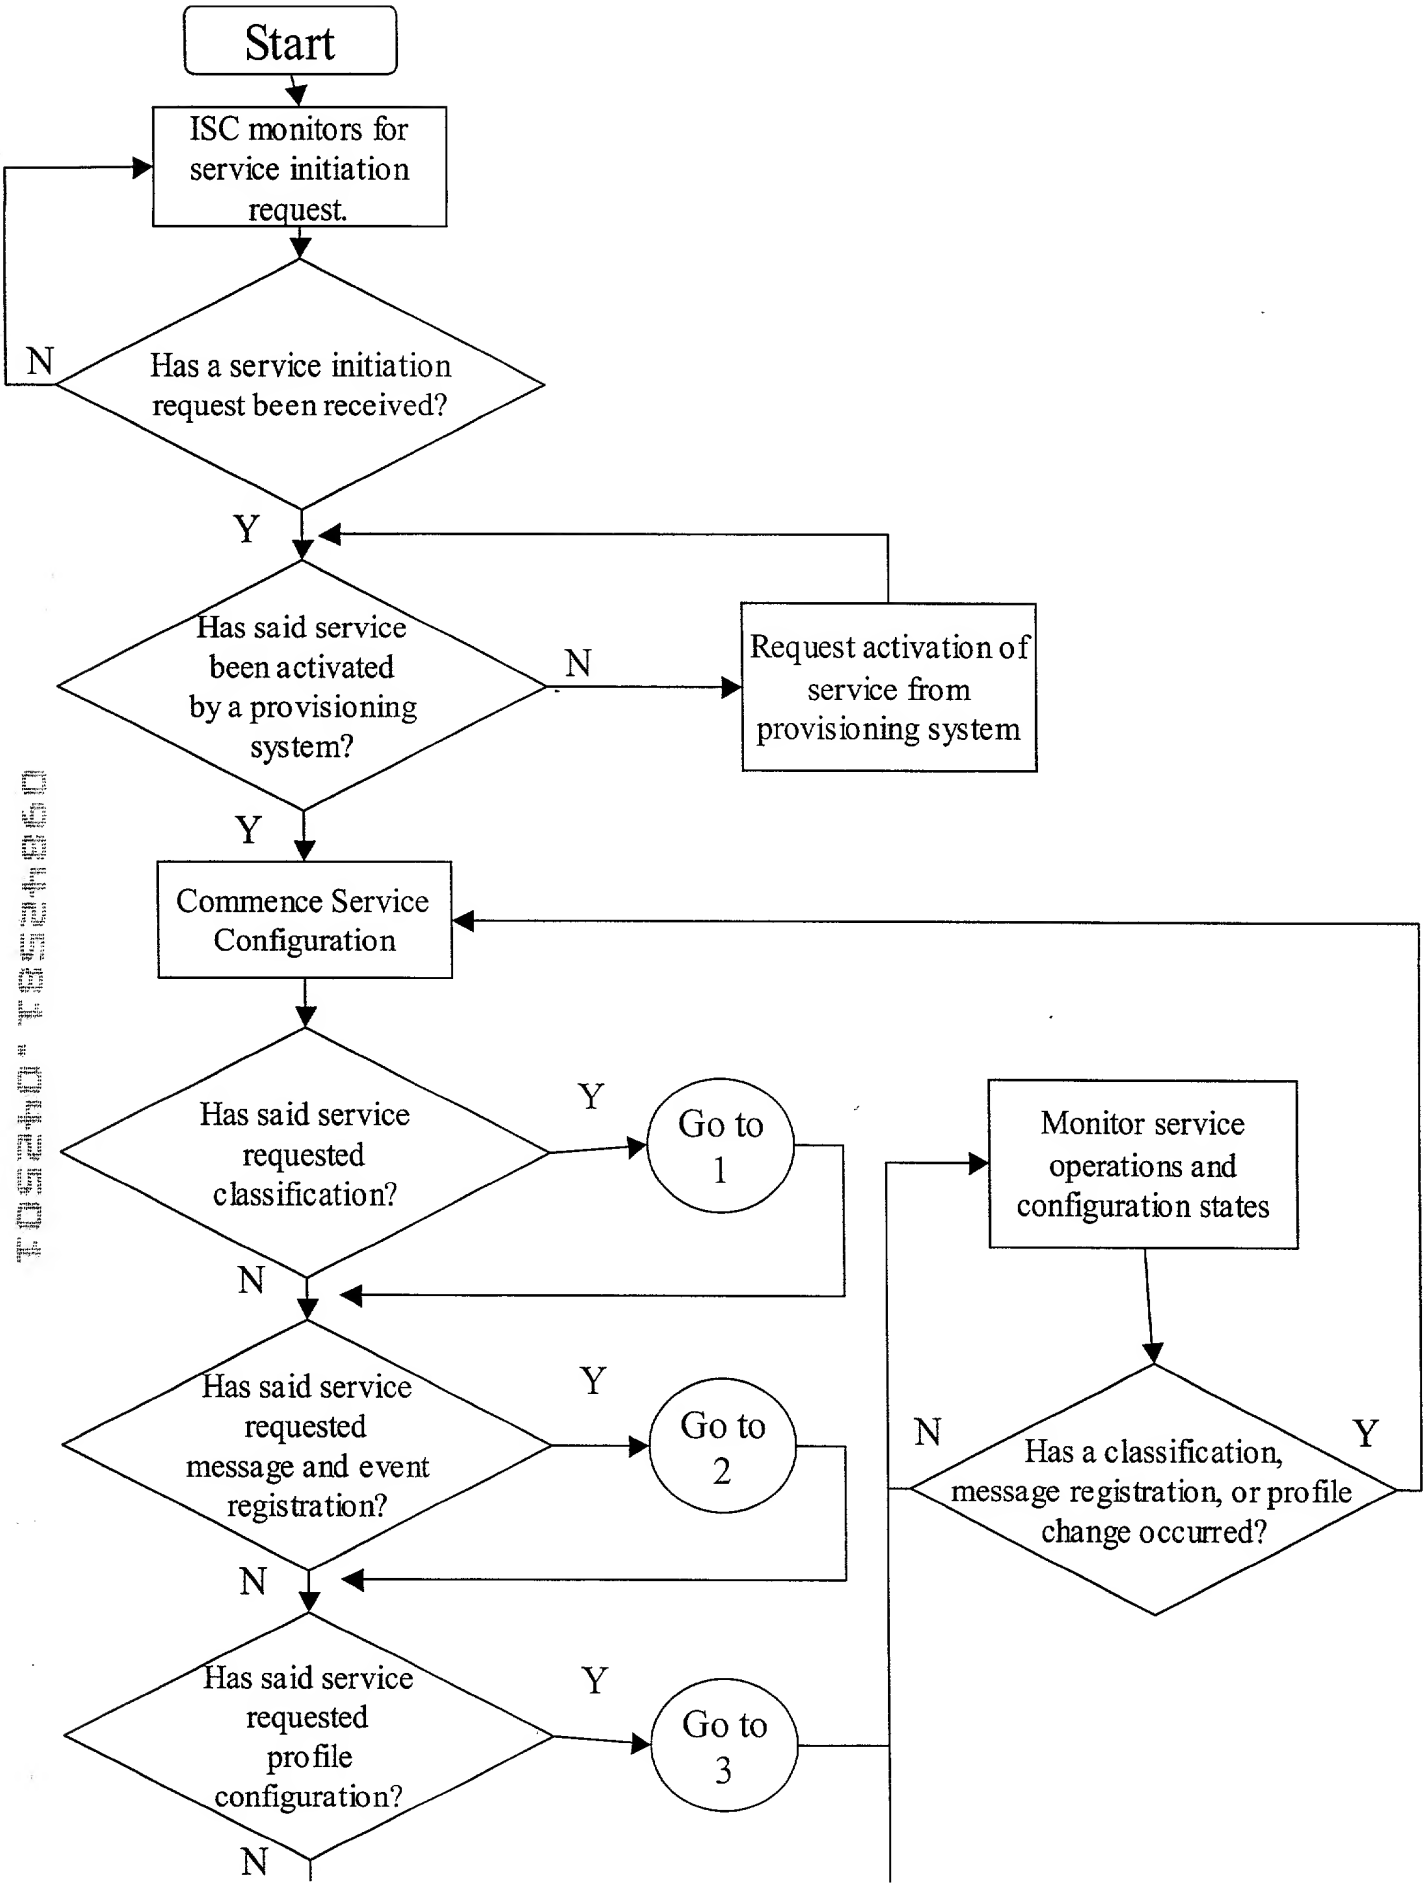
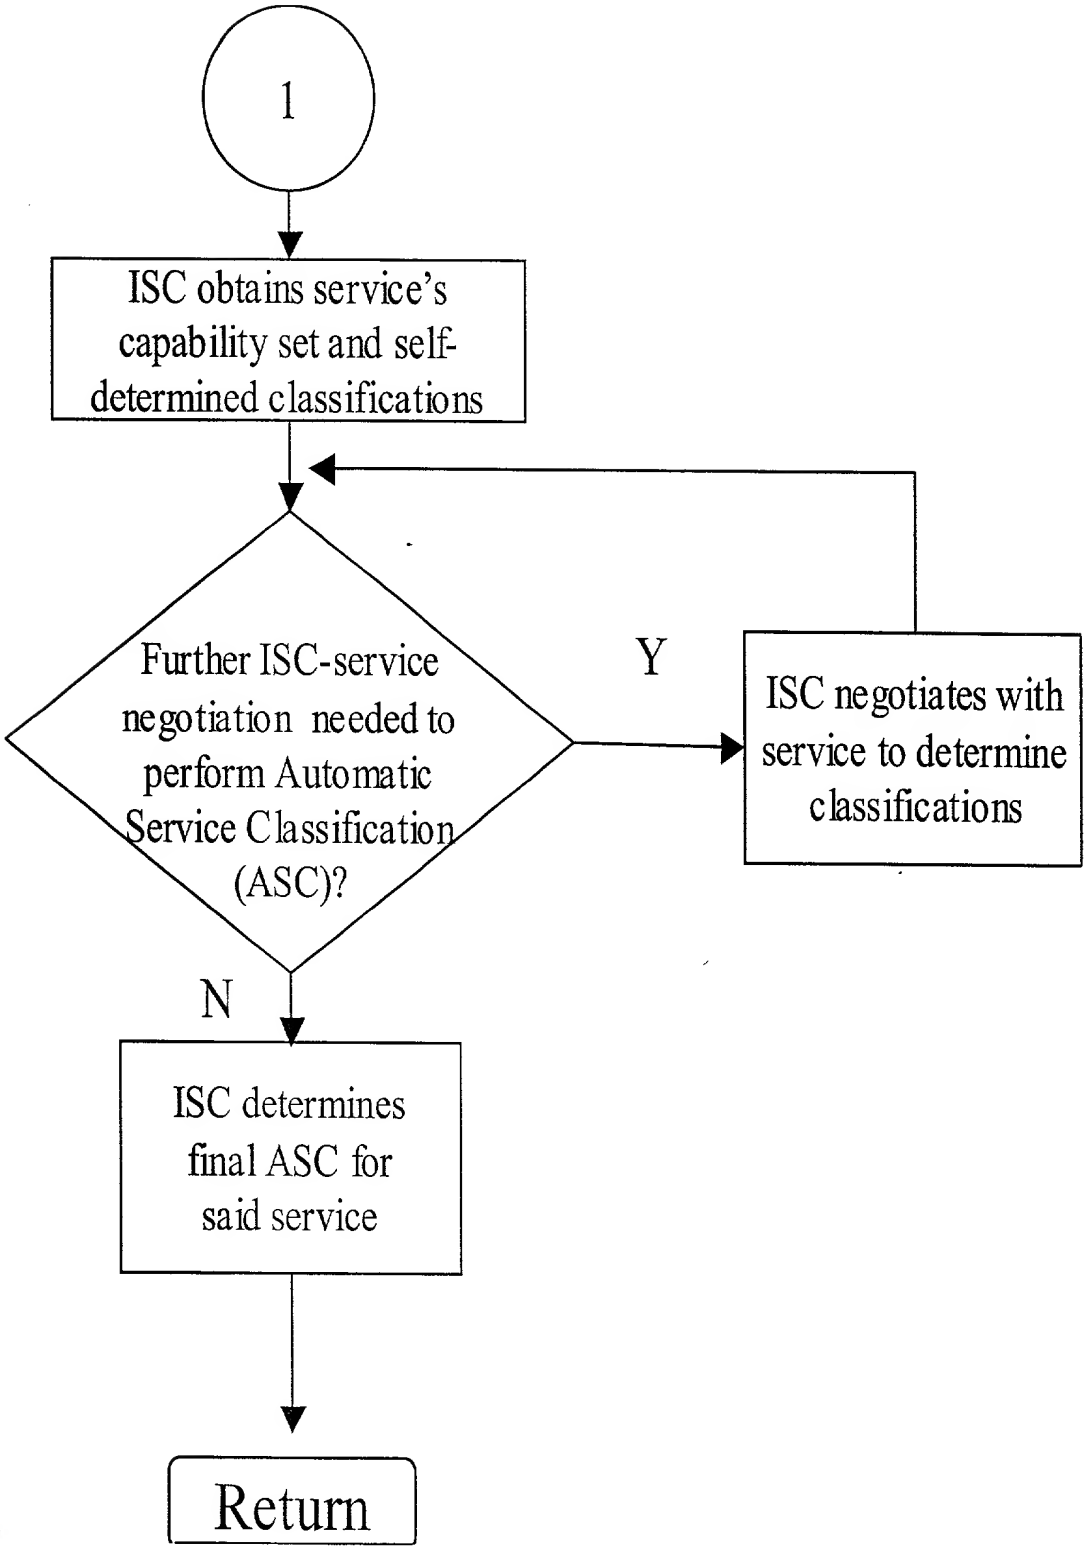
Fig. 3



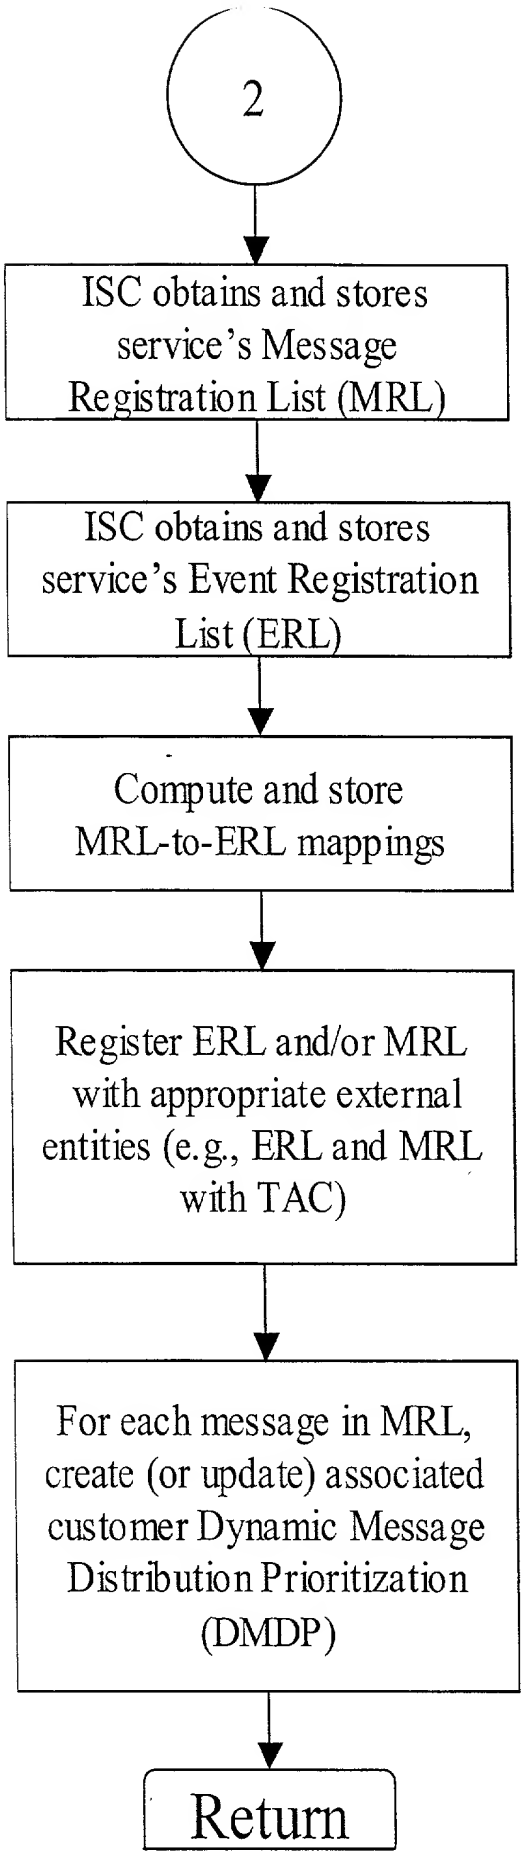
Start
ISC monitors for service initiation request.
Has a service initiation request been received?
N
Y
Has said service been activated by a provisioning system?
N
Request activation of service from provisioning system
Y
Commence Service Configuration
Has said service requested classification?
Y
Go to 1
N
Has said service requested message and event registration?
Y
Go to 2
N
Has said service requested profile configuration?
Y
Go to 3
N
Monitor service operations and configuration states
Has a classification, message registration, or profile change occurred?
N
Y

FIG. 4a



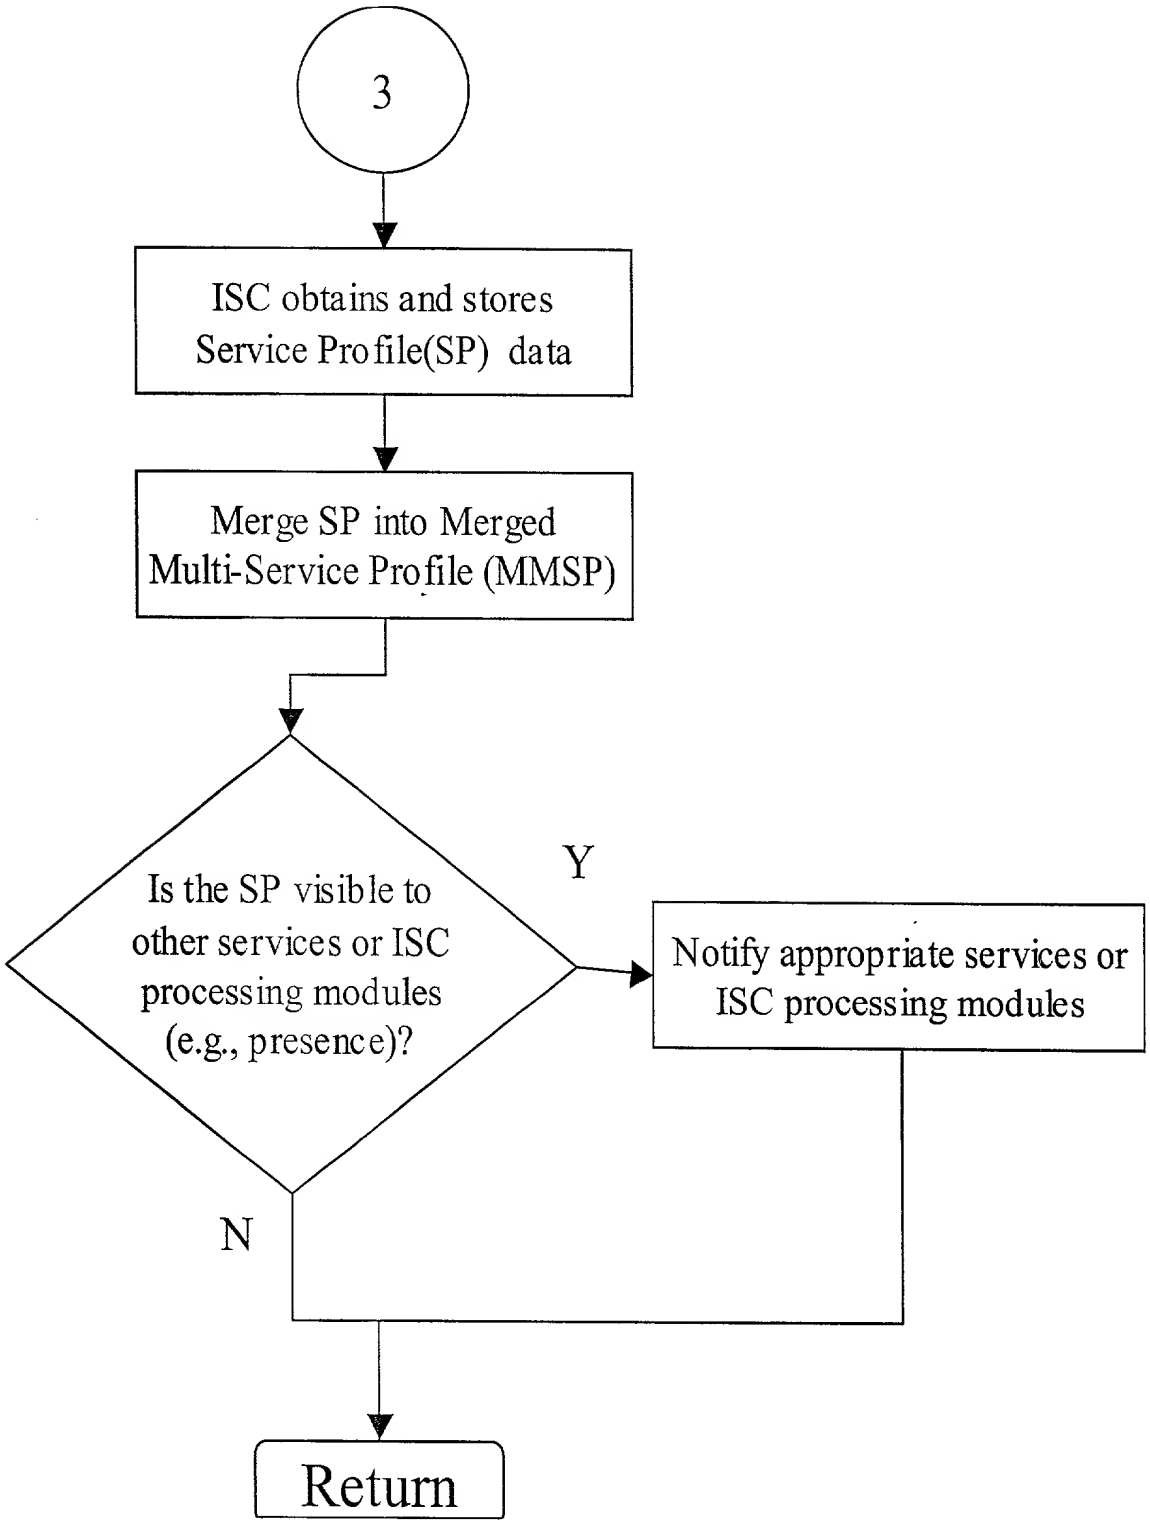
1
ISC obtains service's capability set and self-determined classifications
Further ISC-service negotiation needed to perform Automatic Service Classification (ASC)?
Y
ISC negotiates with service to determine classifications
N
ISC determines final ASC for said service
Return

FIG. 4b



2
ISC obtains and stores service's Message Registration List (MRL)
ISC obtains and stores service's Event Registration List (ERL)
Compute and store MRL-to-ERL mappings
Register ERL and/or MRL with appropriate external entities (e.g., ERL and MRL with TAC)
For each message in MRL, create (or update) associated customer Dynamic Message Distribution Prioritization (DMDP)
Return

FIG. 4c



3
ISC obtains and stores Service Profile(SP) data
Merge SP into Merged Multi-Service Profile (MMSP)
Is the SP visible to other services or ISC processing modules (e.g., presence)?
Y
Notify appropriate services or ISC processing modules
N
Return

FIG. 4d

Figure 5: MMSP – Example Merged Multi–Service Service Profile:

MASTER Key Fields				Presence Service		Availability Service	Selective Call Forwarding Service		Priority Call Waiting Service			Do Not Disturb Service		Instant Messaging Service	No Solicitation Service	Other Service XYZ	
	Device User Name	Device System ID	???	Device State	Device Location		Service Parameter 1	Service Parameter 2		Service Parameter 1	Service Parameter 2		Service Parameter 1	Service Parameter 1	Service Parameter 1		Service Parameter 1
Visibility to Other Services				Visible													
Global Service ID				LREFXB3975ZT													
	Kitchen Phone	XK87RW92K1		ON	Home												
	Bedroom Phone	XK87RT35B2		OFF	Home

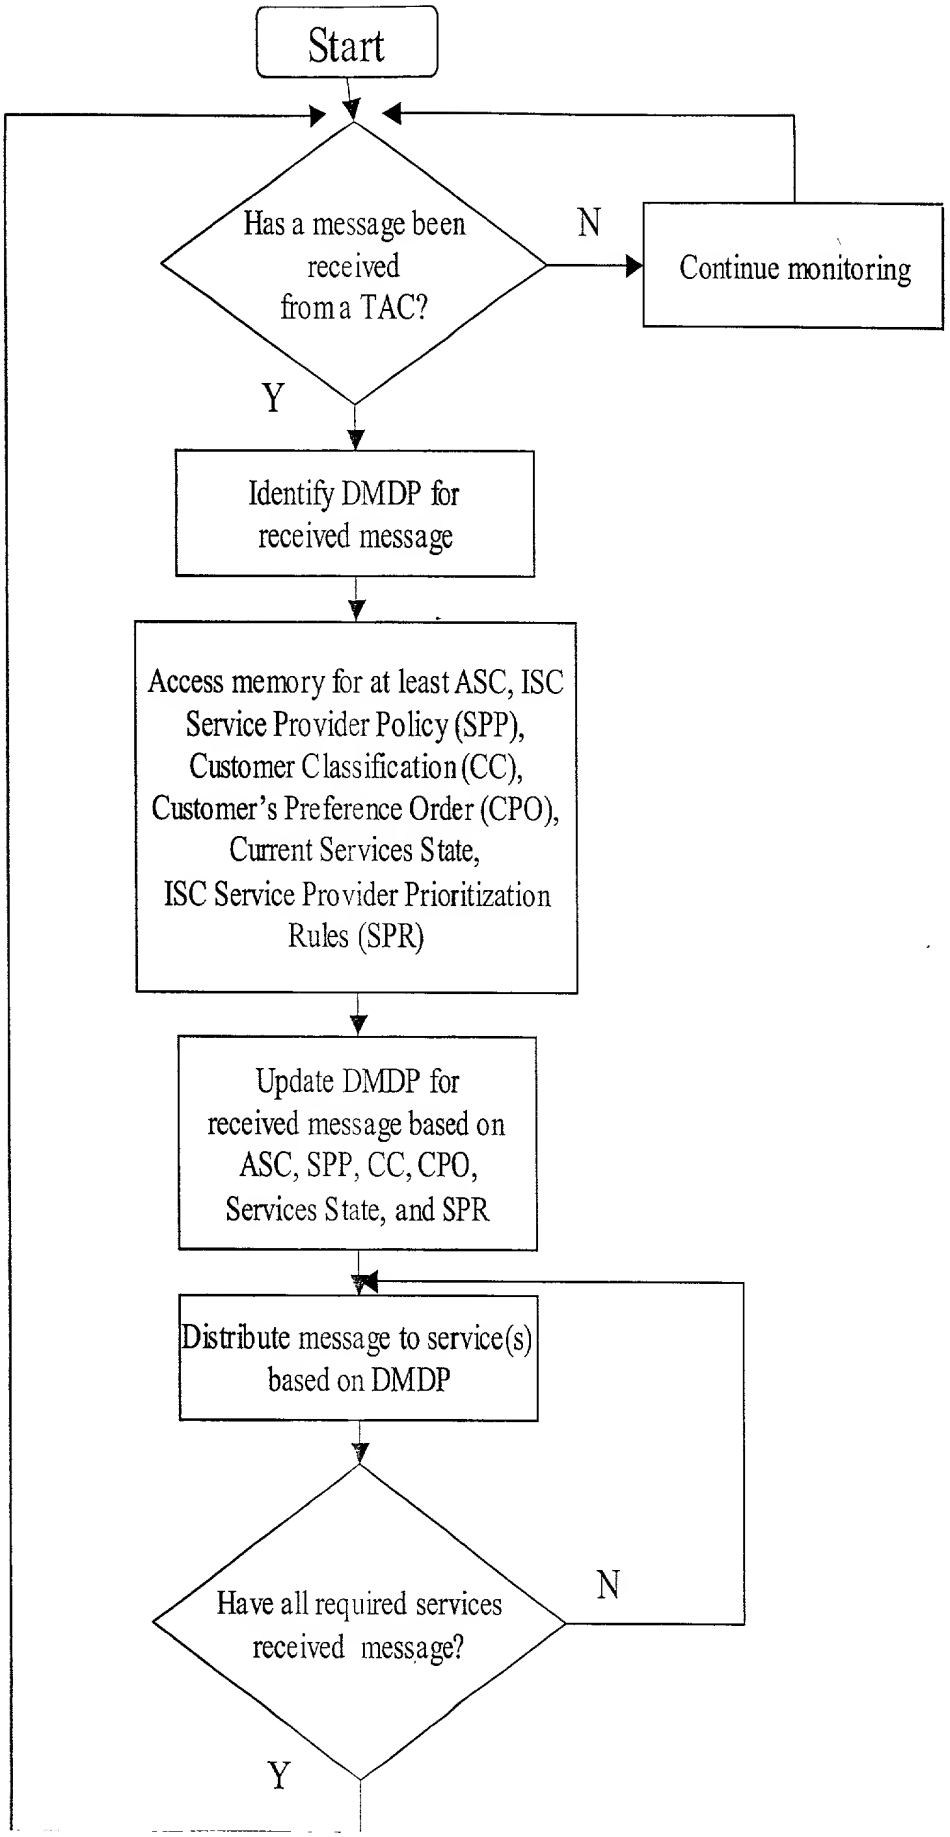
Fig. 6



Start
Has a message been received from a TAC?
N
Continue monitoring
Y
Identify DMDP for received message
Access memory for at least ASC, ISC Service Provider Policy (SPP), Customer Classification (CC), Customer's Preference Order (CPO), Current Services State, ISC Service Provider Prioritization Rules (SPR)
Update DMDP for received message based on ASC, SPP, CC, CPO, Services State, and SPR
Distribute message to service(s) based on DMDP
Have all required services received message?
N
Y
